

When have you used Maths today?

Ms. Shea
School Cook

Mrs. Shea uses maths every day in her job as school cook. She is informed of the number of pupils who require a school dinner. She then weighs the necessary ingredients for each meal and cooks them. This involves selecting the correct temperature and the correct amount of time it takes to cook. Along with her catering assistants they prepare the correct amount of cutlery, cups, trays, tables and chairs. For future dinners, she lets the office know what ingredients she needs and in what quantities. These have to be stored at certain temperatures for health and safety.
